Chapter 3: Understanding how computers work

Activity: Seeing the cycle in action!, pages 24–25

Table 3.3

| CPU component | Clock cycle: | 1 | 1 | 1 | 1 | 1 | 1 | 2 | 2 | 2 | 2 | 2 | 2 | 3 | 3 | 3 | 3 | 3 | 4 | 4 | 4 | 4 |
|---------------|----------------------|-------|---------|---------|---------|---|---|---------|---------|---------|---------|---------|---------|---------|--------|--------|--------|--------|--------|-----|-----|-----|
| | Clock step: | 1 | 2 | 3 | 4 | 5 | 6 | 1 | 2 | 3 | 4 | 5 | 6 | 1 | 2 | 3 | 4 | 5 | 1 | 2 | 3 | 4 |
| | Cycle phase | fetch | | | | | | | | | | | | | | | | | | | | |
| COUNT | counter | 1 | 2 | 3 | 4 | | | 1 | 2 | 3 | 4 | 5 | 6 | 1 | 2 | 3 | 4 | 5 | 1 | 2 | 3 | 4 |
| IR | Instruction register | ADD 0 | LOD-C 3 | LOD-C 3 | LOD-C 3 | | | LOD-C 3 | ADD-C 4 | ADD-C 4 | ADD-C 4 | ADD-C 4 | ADD-C 4 | ADD-C 4 | STO 10 | STO 10 | STO 10 | STO 10 | STO 10 | HLT | HLT | HLT |
| PC | Program counter | 0 | 0 | 1 | 1 | | | 1 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 3 | 3 | 3 | 3 | 3 | 4 | 4 |
| ADDR | Current address | 0 | 0 | 0 | 0 | | | 1 | 1 | 1 | 1 | 1 | 1 | 2 | 2 | 2 | 10 | 10 | 3 | 3 | 3 | 3 |
| X | X register | 0 | 0 | 0 | 0 | | | 0 | 0 | 0 | 3 | 3 | 3 | 3 | 3 | 3 | 3 | 3 | 3 | 3 | 3 | 3 |
| Y | Y register | 0 | 0 | 0 | 0 | | | 0 | 0 | 0 | 4 | 4 | 4 | 4 | 4 | 4 | 4 | 4 | 4 | 4 | 4 | 4 |
| AC | Accumulator | 0 | 0 | 0 | 3 | | | 3 | 3 | 3 | 3 | 7 | 7 | 7 | 7 | 7 | 7 | 7 | 7 | 7 | 7 | 7 |

Review, pages 27–8

Identify

- 1** Fetch-execute cycle, machine cycle or instruction cycle
- 2** CPU carries out the instructions of a computer program by performing the basic arithmetic, logical, control and input/output (I/O) operations specified by the instructions.
- 3**
 - a** The control decodes the program instructions and selects arithmetic and logic operations.
 - b** Integrated circuit(s) comprising volatile primary working memory of a computer.
 - c** The address register holds the address of a block of memory.
 - d** Register that holds the address of the instruction to be executed next.
 - e** Register that holds the address of the current instruction being executed.
 - f** The ALU performs mathematical and logical operations on data.
 - g** Register that stores the results of ALU calculations.
- 4** Code written in higher level human-readable programming languages usually using ordinary text.
- 5** A mnemonic-based language of abbreviations for assembly instructions forming a convenient one-to-one representation for the binary machine language.

Analyse

- 6** In indirect addressing the operand refers to a memory location, whereas in direct addressing it refers to a data value.
- 7**

Fetch: read an instruction stored in memory (RAM)
Decode: translate the instruction
Execute: perform the instruction
Store: write the result to memory (RAM)

Research

- 8** Responses could consider:
 - the amount of RAM memory
 - the speed and generation of your CPU (the system clock)
 - the size of the registers (word size) on the CPU
 - the bus type and speed
 - input and output devices
 - the amount of cache memory.
- 9** Students' responses will vary.
